

VIBRATION DAMPING AND SHOCK ABSORPTION TESTING

As of April 1, 2011 Action offers in-house vibration damping and shock absorption testing designed to meet the following standards:

EU1621 - Simulating motorcycle apparel, accessory and back brace impact

ISO10819 - Simulating glove vibration

With this in-house capability Action Products can quantify design and formulation performance to OEM customer specifications in a cost and time-effective manner. The apparatus for the above standards can be reconfigured to test a wide range of vibration and/or impact scenarios regardless of application.

The following video demonstrates the EU1621 testing apparatus: [Impact Test](#)
